

Remote Data Backups Loyalty LIVE (90-Day Retention) Enterprise Server Backup and Recovery Service

Remote Data Backups LIVE solution automates and integrates the entire data protection workflow by combining automatic backup, offsite storage, archiving with a 90-day retention period, and rapid, reliable recovery thru a guaranteed disk-based continuous data protection.

Operating Systems Supported:

- Windows Server 2003
- Windows Server 2008
- Windows Server 2011
- Linux Red Hat & SUSE
- Sun Solaris

Remote Data Backups LIVE Service Advantages include:

Reliable Backup and Recovery for Your Data

Remote Data Backups Loyalty LIVE solution is the first disk-based online backup and recovery service to:

- Automate and integrate the entire data protection workflow
- Guarantee recovery of your data
- Combine an optional onsite disk backup appliance with automated offsite data storage and archiving

Automated, Integrated, Complete Data Protection

Remote Data Backups Loyalty LIVE solution fully automates and integrates the entire data protection workflow. Now, with ONE integrated solution, you can backup your data, automatically move it offsite to a secure facility, and restore your data rapidly and completely.

Disk-Based Speed and Guaranteed Reliability

Remote Data Backups Loyalty LIVE solution completely eliminates tape from the data protection equation, completely eliminating the risk of data loss. With Remote Data Backups LIVE solution your data is backed up to a secure, remote facility where your data is always available for immediate online recovery. For even faster recovery, Remote Data Backups LIVE also offers Remote Data Backups LIVE TurboRestore, an optional on-site disk appliance for faster, reliable recoveries.

Fully Automated Solution

Remote Data Backups Loyalty LIVE solution is fully automated, to help you reduce the labor costs and headaches associated with traditional tape backup processes. Your backups are performed automatically and continuously, and moved to a secure remote Data Storage Vault and Mirrored to another remote Data Storage Vault. Data is protected as it is created, using 256 bit AES encryption, VPN tunneling and digital certificates.

Remote Data Backups LIVE Features and Benefits Include

- **Continuous Backup**

The Remote Data Backups Loyalty LIVE solution delivers point-in-time recovery of server data through continuous backup, providing nearly 100 recovery points daily. For example, if a virus corrupts your database server, you can use the Web Management Portal to simply roll back the database to its previous state just prior to the corruption. Continuous backup enables you choose the exact version of the file to recover from numerous point-in-time versions each day, for vastly improved Recovery Point Objectives (RPO).

- **Complete, integrated server & open database support**

Includes native open file and database protection, meaning it is ideal for protecting applications such as Exchange, SQL or Oracle databases.

- **Flexibility and Control with Web-Based Management**

You retain complete control of your backup operations. Through the Remote Data Backups Loyalty LIVE Web Management Portal, you can manage and monitor the entire backup and recovery and vaulting process from a web browser anywhere, anytime. All using AES encryption, VPN tunneling and digital certificates.

- **Automatic Offsite to Secure, privately-owned & operated Data Centers**

where your data will be automatically and securely vaulted and remain encrypted.

- **Fast Online Restores using Patented DeltaRestore Technology**

Drastically speeds up data restoration in cases of a common cause of data loss. Instead of restoring an entire file or database, Remote Data Backups Loyalty LIVE solution will allow you to restore only the data that changed – rolling back the data to the exact state it was in prior to the corruption.

- **Rapid Local Restores with Remote Data Backups LIVE TurboRestore**

An optional on-site rapid recovery appliance that works in conjunction with Remote Data Backups LIVE solution for complete data protection, providing fast, local recovery times as well as complete protection against site-level failures.

- **Ease of Use**

Once you have set up Remote Data Backups Loyalty LIVE solution, your backups take place automatically and continuously. You and your staff no longer have to manually backup your servers. At any time you can access the Remote Data Backups LIVE Web Management Portal to check on the status of your backups. Restores are initiated remotely through the same web portal.

- **Focus on Your Business, Not Your Backups**

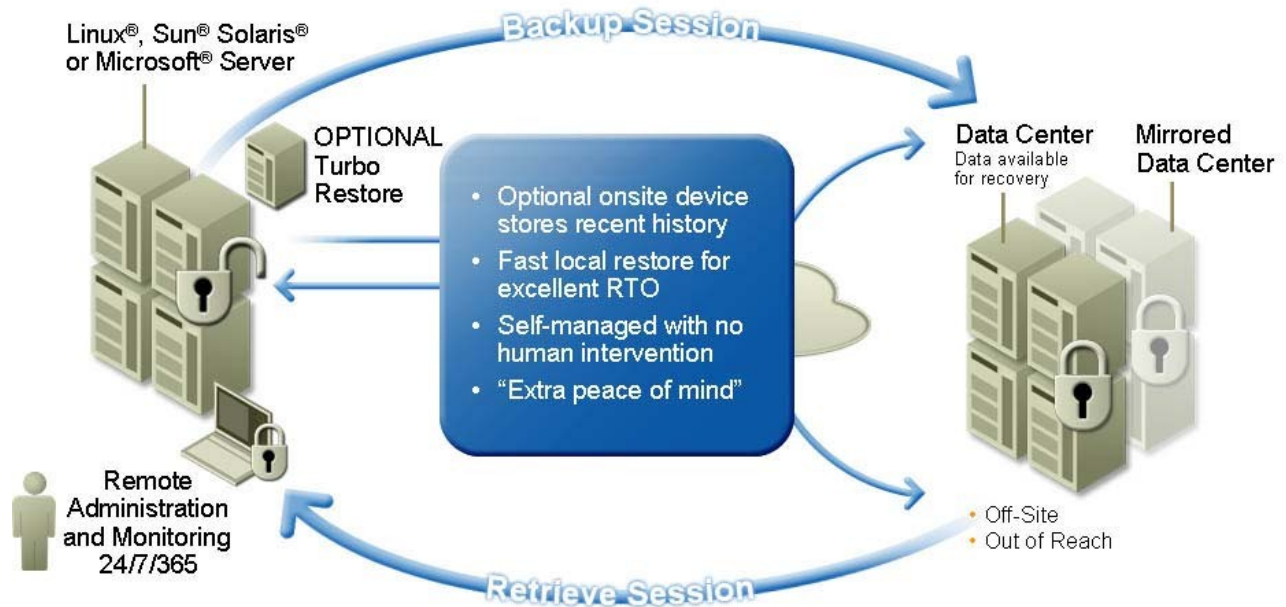

Your company's server data is managed 24x7 by Remote Data Backups LIVE's Service Operations Center (SOC). The SOC automatically detects problems at any stage of backup or recovery, initiates corrective action and proactively notifies you.

- **Peace of Mind**

With Remote Data Backups Loyalty LIVE solution your data is automatically and reliably backed up. You can take advantage of Remote Data Backups LIVE's track record of 99.9999% successful restores.

Remote Data Backups LIVE Service Overview:

How does it work? What does it entail?

Remote Data Backups Loyalty LIVE solution is a disk-based, online backup and recovery Service
